

PEL Services for flagship Marks & Spencer store's sound

PEL Services designed, supplied, installed and commissioned a multi-zone music and public address system at the prestigious retailer's anchor store at Westfield London.

The music and PA system serves the 103,000 square feet of floor space at the store, every inch of which features exciting contemporary internal architecture and premium finishes.

To complement the design and do justice to the impressive space, PEL chose a Bose Professional system featuring over 300 Bose Model 16 ceiling speakers to play music throughout the store and to broadcast messages when required. As a multi-zone system, different music and messages can be played in different areas, making the space extremely versatile.

PEL Services has been providing Marks & Spencer with professional audio systems for a number of years and has completed installations for the retailer across the UK, including its flagship Pantheon store in Oxford Street, London. The combination of 35 years experience in sound and communications systems has proved a winning blend for the company, which is a leading Pose Pro-Partner for the UK and Eire.

PEL Music & Media is a division of PEL Services Ltd., one of the UK's most reliable and respected providers of equipment, installation, maintenance and servicing of quality commercial, music, sound, fire, security and communication systems, with over 35 years experience.
