

PEL equips Bromley Town FC with Crowd Evacuation and matchday sound

PEL can help you protect your supporters by combining an affordable Crowd Evacuation system with highly intelligible outdoor Public Address for matchdays, as we showed recently at Bromley Town FC (pictured).

Using over 35 years of PA and Fire Safety expertise, PEL designed, installed and commissioned the system to cover the whole Football Club, including stands and hospitality facilities.

The layout gives maximum coverage of the stands and is future-proof for a league-to-league promotion-march, with scope to extend and develop for different safety standards and with increasing crowd-sizes.

EQUIPPED FOR YOUR SUCCESS

The PA system uses Bosch and Electro-voice components on a network linked to central IT control.

PEL Technical Director Victor Swain explains: "PEL applies the growing-room lessons from our large stadia projects such as Celtic or Aston Villa, to create optimum systems for up and coming grounds".

FINANCED TO WORK WITH REVENUE:

PEL engineers the technology AND we can arrange a multi-year leasing plan to take advantage of financing, for smoother budgeting.
